# Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

mailroom@bskb.com

## Application No. Applicant(s) 09/833,649 OKAMOTO, SATOSHI Office Action Summary Examiner Art Unit YOGESH K. AGGARWAL 2622 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 21 April 2008. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-14.16-45 and 47-63 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 1-14.16-45 and 47-63 is/are rejected. 7) Claim(s) \_\_\_\_\_ is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are; a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner, Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) □ Some \* c) □ None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

## Response to Arguments

 Applicant's arguments regarding rule 131 are persuasive and therefore the rejection is withdrawn. A new non-final rejection will be issued in view of Applicant's arguments.

#### Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1, 3, 4, 14, 30, 32 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579) in view of Bloomfield et al. (US Patent # 5,555,100).

[Claim 1]

Suzuki teaches an image data transmitting device (figure 1, digital camera) comprising:

an information processing device (16) that creates a reduced image data based on a subject main image data, and stores an image file including the subject main image data and the reduced image data in a storage medium (See figure 11, col. 12 lines 48-64) and

a communication device (19) that transmits the image file stored in the storage medium to an external apparatus (receiving side, figure 36, col. 19 line 59-col. 20 line 12).

Suzuki fails to teach wherein the information processing device deletes from the image file in the storage medium the subject main image data after the communication device transmits the image file data and keeps the reduced image data of the image file after the subject main image data is deleted.

However Bloomfield teaches that a stored image information that has been transmitted to the destination is deleted from the storage database and only a reduced image is created (col. 75 lines 47-56, figure 90).

Therefore taking the combined teachings of Suzuki and Bloomfield, it would be obvious to one skilled in the art at the time of the invention to have been motivated to have the deleted the image file in the storage medium after the communication device transmits the image file data and keeps the reduced image data of the image file in the system of Suzuki as taught in Bloomfield in order to only store the reduced image (thumbnail) in the memory of Suzuki so that the memory capacity can be efficiently used for taking next photograph by only storing a reduced version of the original image that has been already transmitted thereby not missing a photographic opportunity.

[Claim 30]

This is a method claims corresponding to apparatus claim 1. Therefore it has been analyzed and rejected based upon apparatus claim 1.

[Claim 3]

Suzuki teaches a system controller 16 that controls the data and the whole process when the camera is connected to an external device.

[Claim 4]

[Claim 14]

Suzuki in view of Bloomfield fails to teach transmitting images automatically to an external device (figure 37). However official Notice is taken that it is very well known to transmit images automatically in order to complete the process of transmission quickly thereby saving time.

Art Unit: 2622

Suzuki teaches an imaging device (figure 1, imaging circuit 2) that captures the main image data, wherein the main image data is stored in the storage medium (memory card 15).

[Claims 30, 32, 33]

These are method claims corresponding to apparatus claims 1, 3 and 4 respectively. Therefore they have been analyzed and rejected based upon apparatus claims 1, 3 and 4.

 Claims 2 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) in view of Nanba (US Patent # 6.297,870).

[Claim 2]

Suzuki in view of Bloomfield fails to teach a user setting erasure setting for the images.

However Nanba teaches a delete key D for deleting the images recorded in the memory card 8 (col. 3 lines 43-46, figure 1). It would be obvious to one skilled in the art that a delete key may be pressed at any time by a user e.g. after the communication device transmits the main image data to the external apparatus.

Therefore taking the combined teachings of Suzuki, Bloomfield and Nanba, it would be obvious to one skilled in the art at the time of the invention to have been motivated to have user setting erasure setting for the images in order to delete the images according to the user's commands.

[Claim 31]

This is a method claim corresponding to apparatus claim 2. Therefore it has been analyzed and rejected based upon apparatus claim 2.

Application/Control Number: 09/833,649 Art Unit: 2622

Claims 5, 6, 34 and 38 are rejected under 35 U.S.C. 103(a) as being unpatentable over
 Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) in view of Tamura (JP
 Patent # 09-37125).

[Claims 5 and 6]

Suzuki in view of Bloomfield fails to teach wherein the information-processing device adds an indicator indicating that the main image data has been transmitted to a file name of a file of the main image data transmitted. However Tamura teaches wherein the information processing device adds an indicator indicating that the main image data has been transmitted to a file name of a file of the main image data transmitted (Paragraph 23, figure 5). Therefore taking the combined teachings of Suzuki, Bloomfield and Tamura, it would be obvious to one skilled in the art at the time of the invention to have been motivated to have added an indicator indicating that the main image data has been transmitted to a file name of a file of the main image data transmitted in order for the user to easily distinguish the transmitted files.

[Claims 34, 38]

These are method claims corresponding to apparatus claims 5 and 6 respectively. Therefore they have been analyzed and rejected based upon apparatus claims 5 and 6.

 Claims 7-11, 35-37, 39-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100), Tamura (JP Patent # 09-37125) and in further view of Tomat et al. (US Patent # 6,784,925).

[Claims 7, 10 and 11]

Suzuki in view of Bloomfield in view of Tamura teaches the limitations of claim 6 but fails to teach "further comprising a first displaying device that displays a reduced image with at least one

of information that the main image data has been transmitted, and information indicating the external apparatus and an information processing device that adds the information that the main image data has been transmitted, and information indicating the external apparatus". However Tomat et al. teaches that a displaying device (figure 22, element 190) that displays thumbnail images (192) along with information like an acquired icon 224 (figure 24) which indicates the type of the device from where the information can be downloaded and that the main image (col. 15 lines 66-67, col. 16 lines 1-10) and numeral 212 (figure 23) that indicates that indicates which photogroup the picture belongs to. In other words, whether the main image has been transmitted from the camera or any other external device. The PC or camera inherently have a CPU which adds the icons (224 and 212) associated with the thumbnail images 192. Therefore taking the combined teachings of Suzuki, Bloomfield, Tamura and Tomat et al., it would have been obvious to one skilled in the art at the time of the invention to have a first displaying device that displays a reduced image with at least one of information that the main image data has been transmitted, and information indicating the external apparatus and an information processing device that adds the information that the main image data has been transmitted, and information indicating the external apparatus. The benefit of doing so would be so that the user can easily verify the source of the images and auto-correct the images by looking at the icons associated with the thumbnail images.

[Claim 8]

Suzuki, Bloomfield in view of Tamura teaches the limitations of claim 6 but fails to teach "a third setting device with which the user sets reception of the main image data according to the reduced image data stored in the storage medium, wherein the communication device receives the main image data from the external apparatus and stores the main image data in the storage

Art Unit: 2622

medium". However Tomat et al. teaches that a displaying device (figure 22, element 190) that displays thumbnail images (in area 192) that is selected and will cause a full-resolution image associated with it to be copied to the storage device (col. 16 lines 11-20) after downloading from the digital camera in order to view the main image corresponding to the thumbnail image. Therefore taking the combined teachings of Suzuki, Bloomfield, Tamura and Tomat et al., it would have been obvious to one skilled in the art at the time of the invention to have a first displaying device that displays a reduced image and a setting device with which the user sets reception of the main image data according to the reduced image data stored in the storage medium, wherein the communication device receives the main image data from the external apparatus and stores the main image data in the storage medium. The benefit of doing so would be so that the user can easily manipulate images and view them based on the thumbnail images. [Claim 9]

Tomat teaches that after the full resolution file is moved to a storage device (along with associated information) the corresponding photogroup is deleted from the camera so that the CPU replaces the previous information that the main image has been transmitted (col. 16 lines 11-27).

[Claims 35-37]

These are method claims corresponding to apparatus claims 7-9 respectively. Therefore they have been analyzed and rejected based upon apparatus claims 7-9.

[Claims 39-43]

These are method claims corresponding to apparatus claims 7-11 respectively. Therefore they have been analyzed and rejected based upon apparatus claims 7-11.

Art Unit: 2622

 Claims 12, 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) in view of Allen et al. (US Patent # 5,737,491).

[Claim 12]

Suzuki in view of Bloomfield teaches the limitations of claim 1 but fails to teach "a fourth setting device with which the user sets transmission of the main image data stored in the storage medium to the external apparatus, wherein the information processing device produces a transmission information file that shows information set with the fourth setting device, and the communication device transmits the main image data stored in the storage medium to the external apparatus according to the information shown in the transmission information file". However Allen et al. teaches an image file being appended to the digitized voice command header and transmitted to the image fulfillment server where it is compared and decoded based on the appended voice file (col. 5 lines 6-17) in order to decode the image file. Therefore taking the combined teachings of Suzuki, Bloomfield and Allen, it would have been obvious to one skilled in the art at the time of the invention to have been motivated to have a device with which the user sets transmission of the main image data stored in the storage medium to the external apparatus, wherein the information processing device produces a transmission information file that shows information set with the setting device, and the communication device transmits the main image data stored in the storage medium to the external apparatus according to the information shown in the transmission information file. The benefit of doing so would be to have the image file decoded by the external apparatus according to the transmission file generated by the transmission device

Art Unit: 2622

[Claim 44]

This is a method claim corresponding to apparatus claim 12. Therefore they have been analyzed and rejected based upon apparatus claim 12.

8. Claims 13, 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US

Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) in view of Oie (US Patent #

6,188,431).

[Claim 13]

Suzuki in view of Bloomfield teaches the limitations of claim 1 but fails to teach "a second displaying device that displays a message that the main image data is being transmitted while the communication device is transmitting the main image data to the external apparatus". However Oie teaches that during image transmission the message "WAIT" indicating that the image data is currently being transferred appears on the LCD (col. 6 lines 25-36) in order to inform the user that the file is being transmitted. Therefore taking the combined teachings of Suzuki, Bloomfield and Oie, it would have been obvious to one skilled in the art at the time of the invention to have been motivated to have a second displaying device that displays a message that the main image data is being transmitted while the communication device is transmitting the main image data to the external apparatus. The benefit of doing so would be so that the user can know if the file has been transmitted successfully.

[Claim 45]

This is a method claim corresponding to apparatus claim 13. Therefore they have been analyzed and rejected based upon apparatus claim 13.

Application/Control Number: 09/833,649 Art Unit: 2622

Claims 16-21, 29, 47-51 and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100), Nanba (US Patent # 6,297,870) in view of Niikawa et al. (US PG-PUB # 2002/0101440).
 [Claim 16]

Suzuki in view of Bloomfield teaches the limitations of claim 1 but fails to teach "a user setting erasure setting for the images and whereby the reduced image data is produced simultaneously with production and deletion of main image data".

However Nanba teaches a delete key D for deleting the images recorded in the memory card 8 (col. 3 lines 43-46, figure 1).

Therefore taking the combined teachings of Bloomfield and Nanba, it would be obvious to one skilled in the art at the time of the invention to have been motivated to have user setting erasure setting for the images in order to delete the images according to the user's commands.

Suzuki in view of Bloomfield fails to teach whereby the reduced image data is produced simultaneously with production of main image data.

However Niikawa teaches the generation of thumbnail image data and main image data in a single file, which must be generated or deleted simultaneously in order to conform to the EXIF standard (Paragraph 41 and figure 3).

Therefore taking the combined teachings of Suzuki, Bloomfield, Nanba and Niikawa, it would have been obvious to one skilled in the art at the time of the invention to have the reduced image data be produced simultaneously with production of main image data in order to conform with EXIF standard. The benefit of doing so would be to store both the low-resolution and high-resolution data together in an EXIF file format.

Art Unit: 2622

[Claims 17-21, 29]

These claims are similar to claims 2-6, 14. Therefore they have been analyzed and rejected based upon claims 2-6, 14.

[Claims 47-51]

These are method claims corresponding to apparatus claims 16-20 respectively. Therefore they have been analyzed and rejected based upon apparatus claims 16-20.

[Claim 55]

This claim is similar to claim 38. Therefore it has been analyzed and rejected based upon claim 38.

Claims 22-26, 52-54, 56-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) and Niikawa et al. (US PG-PUB # 2002/0101440) and in further view of Tomat et al. (US Patent # 6,784,925).

[Claims 22-26]

These claims are similar to claims 7-11. Therefore they have been analyzed and rejected based upon claims 7-11.

[Claims 52-54]

These are method claims corresponding to apparatus claims 22-24 respectively. Therefore they have been analyzed and rejected based upon apparatus claims 22-24.

[Claims 56-60]

These claims are similar to claims 39-43. Therefore they have been analyzed and rejected based upon claims 39-43.

Application/Control Number: 09/833,649 Art Unit: 2622

Claims 27, 61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) and Niikawa et al. (US PG-PUB # 2002/0101440) and in further view of Allen et al. (US Patent # 5,737,491).

[Claim 27]

This claim is similar to claim 12. Therefore it has been analyzed and rejected based upon claim 12.

[Claim 61]

This claim is similar to claim 44. Therefore it has been analyzed and rejected based upon claim 44.

Claims 28, 62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) and Niikawa et al. (US PG-PUB # 2002/0101440) and in further view of Oie (US Patent # 6,784,925).

[Claim 28]

This claim is similar to claim 13. Therefore it has been analyzed and rejected based upon claim 13.

[Claim 62]

This claim is similar to claim 45. Therefore it has been analyzed and rejected based upon claim 45.

 Claim 63 is rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki (US Patent # 5,724,579), Bloomfield (US Patent # 5,555,100) and further in view of Tamura (JP Patent # 09-37125).

[Claim 63]

Art Unit: 2622

Suzuki in view of Bloomfield teaches an image data processing device (Suzuki, figure 1, camera), a transmission device (19) that transmits at least said basic image data to an external device.

Suzuki in view of Bloomfield fails to teach wherein the information-processing device adds an indicator indicating that the main image data has been transmitted to a file name of a file of the main image data transmitted. However Tamura teaches wherein the information processing device adds an indicator indicating that the main image data has been transmitted to a file name of a file of the main image data transmitted (Paragraph 23, figure 5). Therefore taking the combined teachings of Suzuki, Bloomfield and Tamura, it would be obvious to one skilled in the art at the time of the invention to have been motivated to have added an indicator indicating that the main image data has been transmitted to a file name of a file of the main image data transmitted in order for the user to easily distinguish the transmitted files.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to YOGESH K. AGGARWAL whose telephone number is (571)272-7360. The examiner can normally be reached on M-F 9:00AM-5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh Tran can be reached on (571)-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
